Log Stand Manual

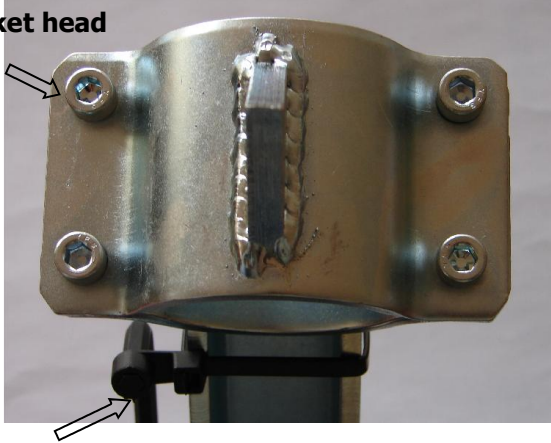

LogRite's log stand attachment can be placed on either our cant hooks or peaveys. This attachment allows you to roll a log onto the tool itself. The tool and log stand then hold the log up off the ground so that a cut can be made safely through the log without cutting into the ground. The log stand works equally well with both the peavey and cant hook and then can be removed so that it is not in the way when using your cant hook or peavey for moving logs.

Installation

Attaching your log stand to your peavey or cant is very easy. Using the attached allen wrench loosen the four socket head cap screws on the collar. Slide the cant hook or peavey through the collar so that the bottom of the stand is on the opposite side of the swinging hook and facing the point. Tighten the four socket head cap screws.

allen wrench

Usage

1. Place swinging hook over log with stand toward you.
2. Pull handle toward you to set hook.
3. Continue to pull handle toward you, log will begin to lift and log stand will set on the ground.
4. Continue to pull handle down until it rests on the ground.

1. Set the hook (Peavey and log stand)

2. Peavey and log stand turning log

4. Log stand holding log
